Continuation of Substance of Interview including description of the general nature of what was discussed: Examiner stated that in regard to claim 1, that Merritt 718,853 anticipates claim 1 by disclosing a frame with upper wall (top of A), at least two side walls (sides of A), a first opening (large opening adjacent F), a second opening (A'), a striker (B'), a biasing member (B), a set lever (E), a trigger (C), and a floor (F) spaced from the upper wall and extending adjacent the first and second openings (the term adjacent is a relative term, since F extends within the housing, it can be interpreted as extending adjacent the openings). Examiner proposed to further recite that the length of the floor being more than half the distance between the first and second openings to overcome the Merritt patent. Examiner proposed to cancel claim 13 since it is redundant with the step of "positioning a floor plate" of claim 9. Examiner proposed to amend claims 20 and 21 for consistency with regard to the term "first wall" of claim 1. Examiner proposed to amend claim 23 to give antecedent basis for the four posts and properly recite them with regard to "a post" recited in claim 22. Examiner proposed to amend claim 26 to properly recite the floor sections being adjacent each end of the housing where the apertures in the end walls are located. Applicant agreed to the proposed changes. Please see the Examiner's Amendment for details.
